

<b>CCure Expansion Project</b>	
<b>Topic:</b>	Project Support
<b>Client:</b>	Exelon
	<b>Objective:</b> <ul style="list-style-type: none"> <li>To increase the architecture of the current CCure application environment to cover new opening locations. CCure is a physical security application used in the Exelon system to monitor and control physical access used to secure corporate and business unit locations. Events are recorded, personnel access is managed, reports are generated and system activity is monitored using the CCure application.</li> </ul>
	<b>The Challenge:</b> <ul style="list-style-type: none"> <li>Our client was faced with meeting and organizing all the requirements for the addition of each application and database servers for each new location needing the CCure application. These requirements included: <ul style="list-style-type: none"> <li>Business identifications</li> <li>Technical identifications</li> <li>Working with different teams</li> <li>Time scheduling for implementation</li> <li>Potential risks upon implementation</li> </ul> </li> </ul>
	<b>Our Approach:</b> <ul style="list-style-type: none"> <li>Contributed on planning and the organization of meetings with all related parties within Exelon, defining and documenting the requirements to meet the new location addition into the current CCure environment.</li> <li>Provided support in identifying the technical requirements needed to increase the existing system architecture. We assisted in requesting work from different teams and seeing the completion of the new application and database instances to be ready to host CCure.</li> <li>Applied preventive measures to secure system integrity upon possible risk of failure.</li> <li>Coordinated every effort all the way up to the scheduled Production environment implementation. We also organized different teams and resources to comply with the agreed date for implementation.</li> </ul>
	<b>The Results:</b> <ul style="list-style-type: none"> <li>Added the CCure 9000 application to the 2 new servers, connecting it to the current environment, and thus increasing its availability for over 900 more users in the physical locations.</li> <li>Complying with our service agreement, Sath continues to support every effort towards this expansion project, any application troubleshooting issue that may arise and working with different teams inside the client's business.</li> </ul>
	<b>Value Created:</b> <ul style="list-style-type: none"> <li>Expanded the availability of one of the most important security applications within the company.</li> <li>Documented the process to ease future implementations.</li> <li>Identified the roadblocks and prepared workarounds for future implementations.</li> </ul>

\*Upon completion of installing the CCure 9000 application to the 2 new servers Exelon requested this be done to 10 more locations/20 additional servers.\*
